Annual progress report pdf download 2019 pdf

I'm not robot!

THESIS: Firefighters might not know what they're up against when they enter a burning building. But if they have a way to assess the danger inside before going in, they'll be better equipped to avoid injuries and deaths.METHOD: Build an orb that can be tossed inside a building to gather information and send it back to the firefighters–almost like a satellite sending data back to NASA. The 1.5-pound Fireball gathers data and uploads it instantly via built-in Wi-Fi. Firefighters can pull up information on an app.RESULTS OF TEST FIRE: The app connected to the Fireball tells important details such as the levels of dust, which indicate the likelihood of explosions, guiding firefighters to hold back or increase airflow to the area. If the temperature monitor shows a site that's hot but has no flames, it could signal an imminent explosion; firefighters may call for reinforcements, get more hoses, and ventilate the area. Ammonia could suggest the presence of hazardous materials, which means firefighters should keep their masks on longer and call for a special-response team.REMAINING CHALLENGES:1. Strengthen insulation Once inside a fire, the Fireball's clock is ticking: Its electronics need to gather and send data before they begin to melt (which takes about 45 seconds in 500-degree heat). Right now it works, but it's not perfect. Intel may improve the ball's insulation to buy the tech more time.2. Ensure an upright landing When the Fireball lands in a building, its sensors need to point upward, not toward the ground. To do that, the ball is bottom-weighted and the sensor is on top–landing and orienting like a Weeble. Intel must refine that mechanism to work amid debris.3. Fine-tune the sensors If a sensor is wrong about, say, how much gasoline is in a room, firefighters could be in trouble. Intel is conducting extensive testing to make sure its data margin of error is as small as possible.FUTURE PLANS The Fireball works well in a lab but now must undergo rigorous real-world testing. ("You never know what you'll uncover in an actual fire," says lead technologist Terry O'Shea.) Intel hopes to have the Fireball market ready within six months, at which point it will license the tech to a company that targets firefighters.illustration by chad kouri Each year, EAN's Annual Progress Report for Vermont provides an in-depth analysis of where Vermont stands relative to its renewable energy and emissions reduction commitments. This year's report highlights how much fossil fuel dependence is currently costing the Vermont economy, as well as how much Vermonters stand to save as a result of a transition to more efficient and renewable technologies in heating and transportation. We've posted high-resolution versions of most of the key graphics here for you to use. Please credit EAN and let us know if you have questions before you use. Request physical copies of the report for your upcoming event by emailing Cara Robechek (crobechek@eanvt.org). You can also download the report and print report from this page. If you know you'd like to share a number of reports at an upcoming event, please let us know in advance. We'll do our best to accommodate everyone's requests! When you email, please let Cara know the number of reports you're requesting, the event title/description, and the date you'd like the reports. For many homeschool families, tasks for wrapping up the school year include writing an annual progress report or compiling a portfolio. The job doesn't have to be stressful or overwhelming. In fact, it's often a delightful opportunity to reflect on the complete school year. A progress report may seem unnecessary for homeschooled students. After all, isn't the point of a progress report to let parents know how their children are doing in school? It's true that, as a homeschooling parent, you don't need a report from your child's teacher to know how he is advancing academically. However, for some reasons you might want to complete an annual assessment of your student's progress. The homeschooling laws for many states require that parents write an annual progress report or compile a portfolio for each student. Some parents must submit the report or portfolio to a governing body or an educational liaison while others are only required to keep such documents on file. Writing a progress report also provides a means for objectively assessing how much your students have learned, experienced, and accomplished over the course of the school year. Comparing these reports year after year can reveal your child's strengths and weaknesses and help you chart their overall academic development. Progress reports can provide an interesting snapshot of your homeschool year for the non-teaching parent. Sometimes the teaching parent, who is with the kids every day, doesn't realize all the moments that the nonteaching parent misses. A homeschool progress report can provide valuable feedback for your students, helping them identify areas that need improvement and recognize patterns of strength. Consider having your students complete a self-evaluation to include with the report you write. Finally, detailed homeschool progress reports become cherished keepsakes over the course of your child's school years. Writing a report for your first-grader may seem an unnecessary chore, but you'll read it with fondness when she's about to graduate high school. If you've never written a progress report, you may be unsure what you need to include. Your state's homeschool laws may dictate the components to some degree. Beyond that, a progress report can be as concise or as detailed as you'd like to make it. A homeschool progress report should include basic, factual information about your student, regardless of whether you are required to submit it to anyone. You will likely enjoy looking back over these reports as your student gets older, so be sure to include details such as age and grade level, along with a photo. Include a resource list for your school year. This list may include the titles and authors of your homeschool curriculum, websites visited, and online classes. You may also want to add a course description for the classes your student completed. List the titles of books your children read as well as family read-alouds. Include outside classes such as co-op, driver's education, or music. List any nationally standardized tests your students completed along with their scores. List your student's extracurricular activities, such as sports, clubs, or scouting. Note any awards or recognition received. Log volunteer hours, community service, and part-time jobs held. List any field trips taken. You may wish to include work samples such as essays, projects, and artwork. Include photos of hands-on projects that your students complete. You can include completed tests, but don't use those exclusively. Tests don't show the full spectrum of your student's education. Even though you and your student may want to forget the areas of struggle, keeping samples that capture them can help you see progress in the coming years. If your state requires a certain number of school days or hours, include that in your report. If you give formal grades, even satisfactory or needs improvement, add those to your progress report. One method of writing a progress report is to use the scope and sequence of your homeschool materials to help you outline the skills and concepts your child has started or mastered. A scope and sequence is a list of all the concepts, skills, and topics that the curriculum covers and the order in which they are introduced. You can find this list in most homeschool curricula. If yours doesn't include it, check the table of contents' main subheadings for ideas on what to include in your child's progress report. This simple, somewhat clinical method is a quick and easy option for meeting state laws. First, list each subject you covered in your homeschool during the year. Some examples include: MathHistory/social studiesScienceLanguage artsReadingArtDramaPhysical education Then, under each heading, note the benchmarks your student achieved, along with those that are in progress and those to which he was introduced. For example, under math, you might list accomplishments such as: Skip counting by 2's, 5's, and 10'sCounting and writing to 100Ordinal numbersAddition and subtractionEstimationGraphing You may want to include a code after each, such as A (achieved), IP (in progress), and I (introduced). In addition to your homeschool curriculum's scope and sequence, a typical course of study reference may help you to consider all the concepts your student has covered over the year and help you identify those she may need to work on next year. A narrative progress report is another option—a bit more personal and composed in a more conversational style. These can be written as a journal entry snapshot, indicating what your children have learned each year. With a narrative progress report, you as the homeschool teacher can highlight a student's progress, include observations about areas of strength and weakness, and record details about your child's developmental progress. You can also add notes about any academic struggles you've observed and areas on which you'd like to focus on in the upcoming year. Whichever method you choose, writing a progress report doesn't have to be tedious. It's an opportunity to reflect on all that you and your homeschooled students have accomplished during the year and begin to focus on the promise of the upcoming year.
